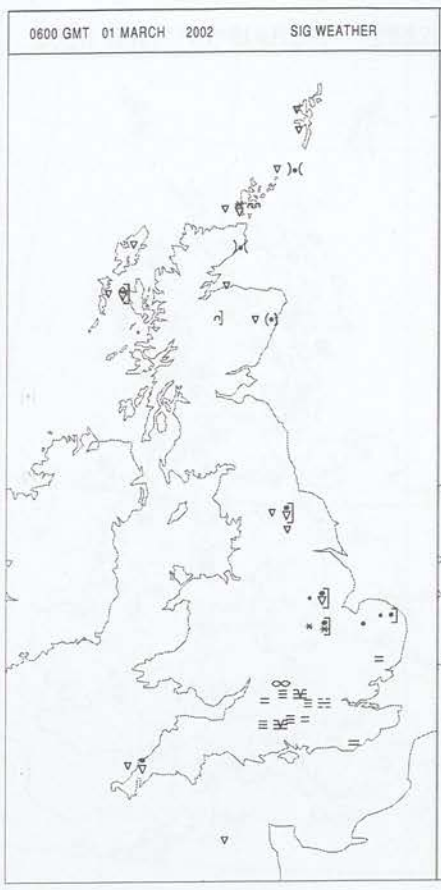
SIGNIFICANT WEATHER



Summary of UK Weather for Friday 01 March 2002.

A band of cloud and patchy light rain, drizzle or sleet was lying across Lincolnshire and the East Midlands through the early hours. In eastern and northern Scotland there were some wintry showers, but many places were dry with clear periods. By morning though, fog patches were developing, whilst there was a widespread frost. In addition some showers close to the south coast ran across parts of the west country at times.

By the end of the morning any fog patches had dispersed with wintry showers in the north having fed into northeast England. The area of cloud and patchy precipitation finally faded out as it sank south across southern England in the middle of the afternoon. At the same time much of Scotland became dry, although there were odd wintry showers affecting the extreme northeast. The evening brought increasing amounts of high cloud across much of Scotland with some rain into the far north. A few wintry showers continued down the coast of eastern England but otherwise it was dry and clear.

Temperatures were mostly within 2 degrees either side of average.

EXTREMES

Highest Maximum:
9.9 St Catherines Point, Isle Of Wight
Lowest Maximum:
3.2 Lerwick, Shetland
3.2 Loch Glascarnoch, Ross & Cromarty
Lowest Minimum:
-4.8 Benson, Oxfordshire
Lowest Grass Minimum:
-11.0 Prestwick, Ayrshire
Most Rain:
9.4 Loch Glascarnoch, Ross & Cromarty
Most Sun:
9.4 Ronaldsway, Isle Of Man

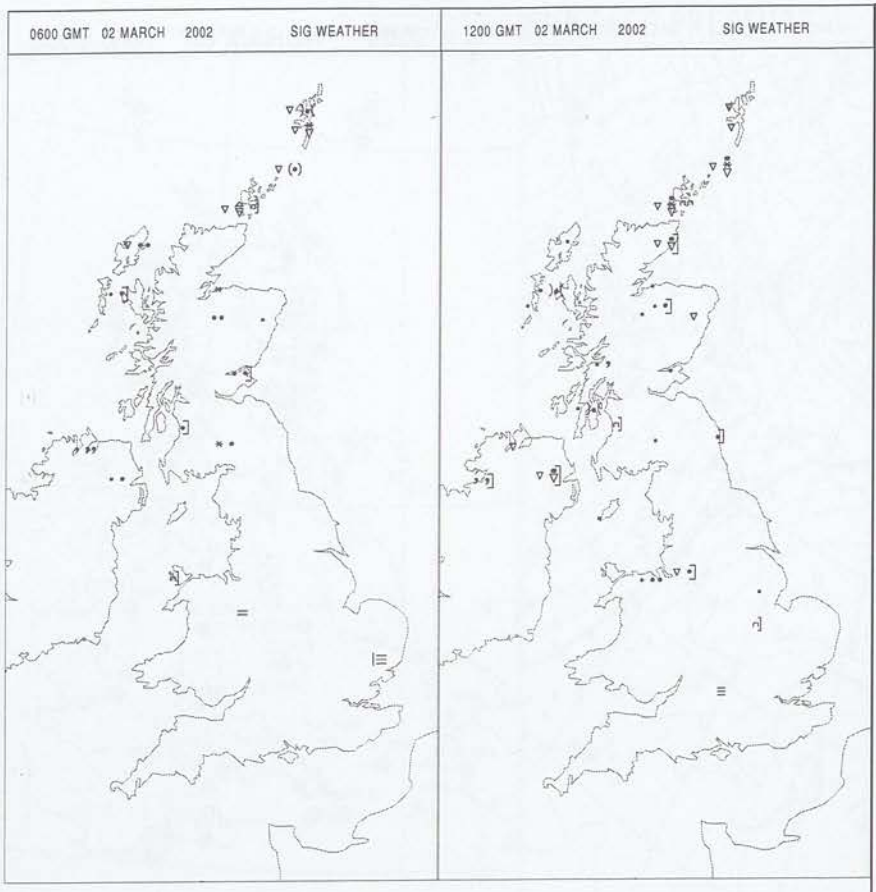
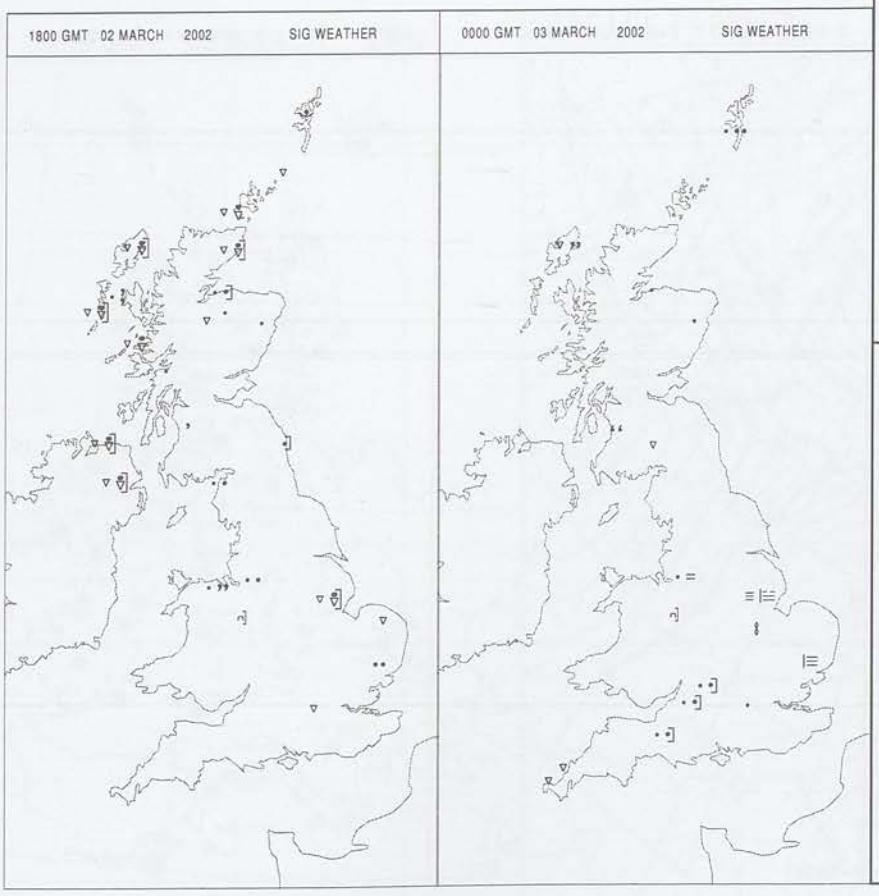
SIGNIFICANT WEATHER





Summary of UK Weather for Saturday 02 March 2002.

Much of England and Wales had a dry night with long clear periods. There was a frost in many areas and some fog patches. Northern Ireland started dry but thickening cloud brought a little rain by morning. Across Scotland it was more unsettled with showery outbreaks of rain moving south into the far north of England later.

During the day the area of cloud with a few showers or outbreaks of light rain spread gradually south, reaching the Midlands around lunchtime and the far south by early evening. Ahead of this there was a good deal of sunshine. A further pulse of rain spread into northwest England by evening and then south into the Midlands. To the north over Scotland and Northern Ireland there was a good deal of cloud and some scattered showers with just a few sunny intervals. Amounts of rain were mostly small throughout the UK.

Temperatures ranged from cold in the Northern Islands to near normal for the bulk of the country but milder air lifted some western locations, especially Northern Ireland, into the mild category.

EXTREMES

Highest Maximum:
10.6 Castlederg, Tyrone
Lowest Maximum:
5.6 Bingley, West Yorkshire
Lowest Minimum:
-6.2 Benson, Oxfordshire
Lowest Grass Minimum:
-10.4 Bracknell, Berkshire
Most Rain:
12.8 Loch Glascarnoch, Ross & Cromarty

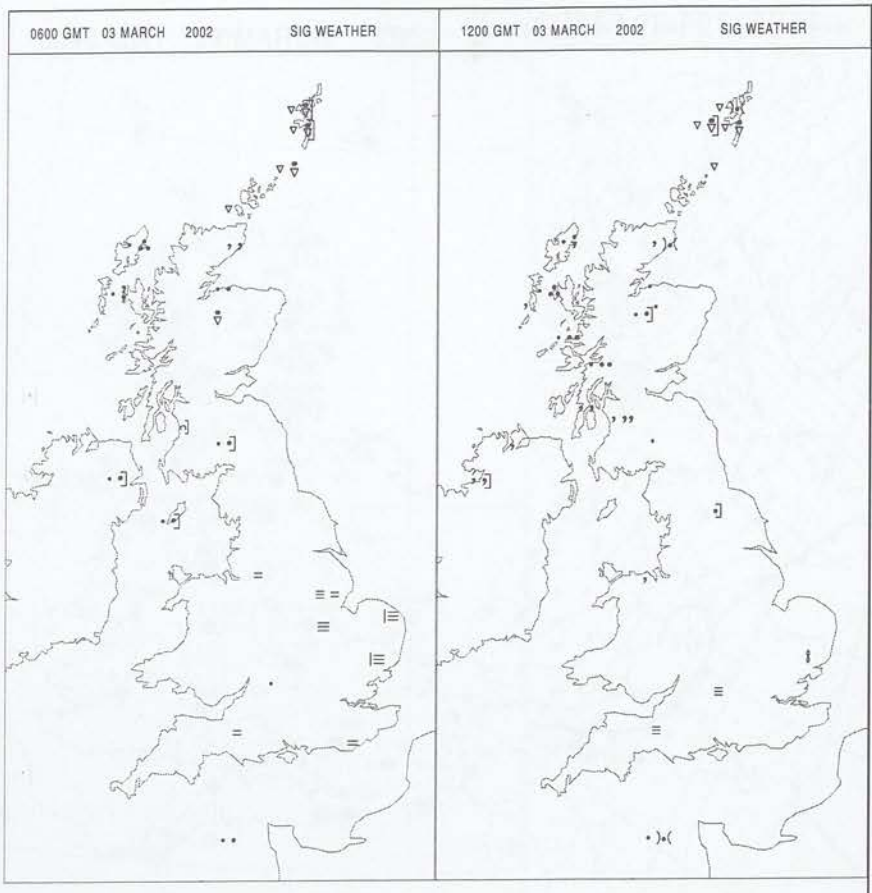
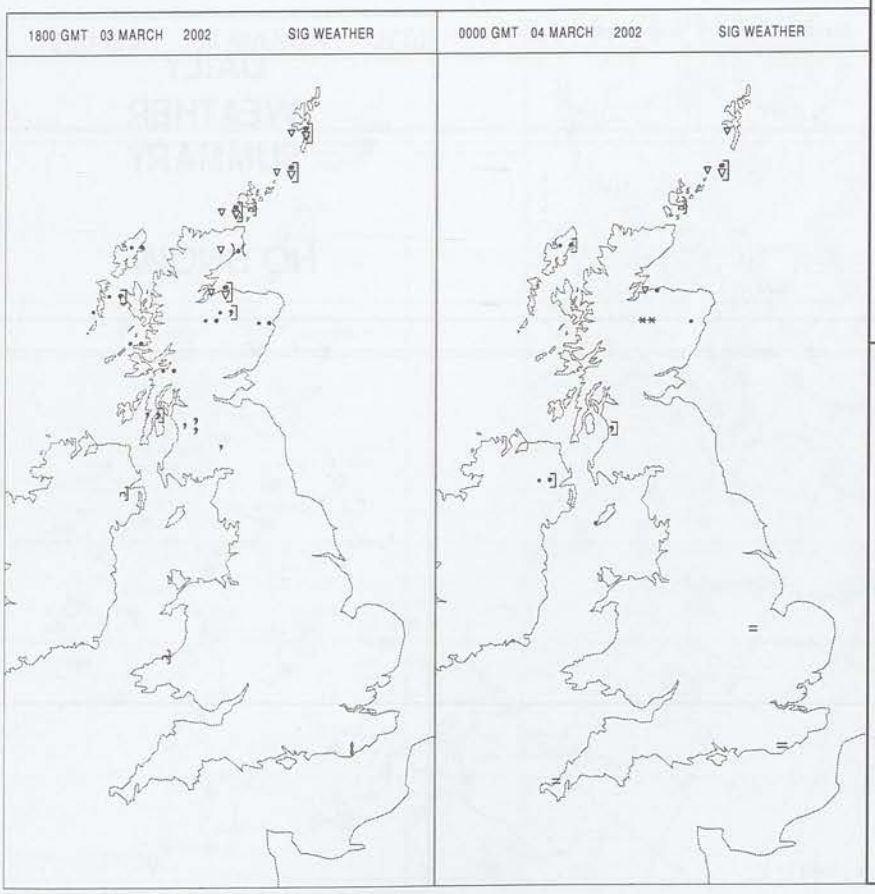
SIGNIFICANT WEATHER





Summary of UK Weather for Sunday 03 March 2002.

Overnight, the whole of the UK had very variable cloud cover with an area of patchy mainly light rain running southeast across east Wales, the Midlands, and on into central southern England later in the night. Outbreaks of heavier rain affected much of western Scotland by dawn with a few light outbreaks elsewhere in Northern Ireland and northeast England. East Anglia saw long clear spells and some dense fog patches.

During the day the fog cleared to leave parts of East Anglia and areas near the south coast dry with some long sunny periods. Elsewhere clouds were more persistent restricting amounts of sunshine especially near west facing coast and hills where a little drizzle fell. Further north across Scotland the rain became lighter and more patchy through the day, with the Orkneys and Shetlands seeing sunshine and showers. Northern Ireland had a dry but mostly cloudy day.

After a frost in parts of the southeast at first the day saw temperatures rise to be mostly in the near normal to mild category across the whole country.

EXTREMES

Highest Maximum:
11.9 Tain Range, Ross & Cromarty
Lowest Maximum:
6.9 Bingley, West Yorkshire

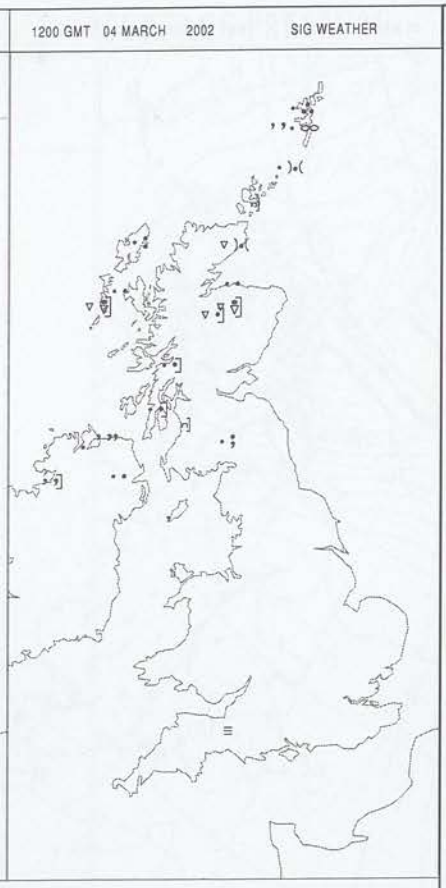
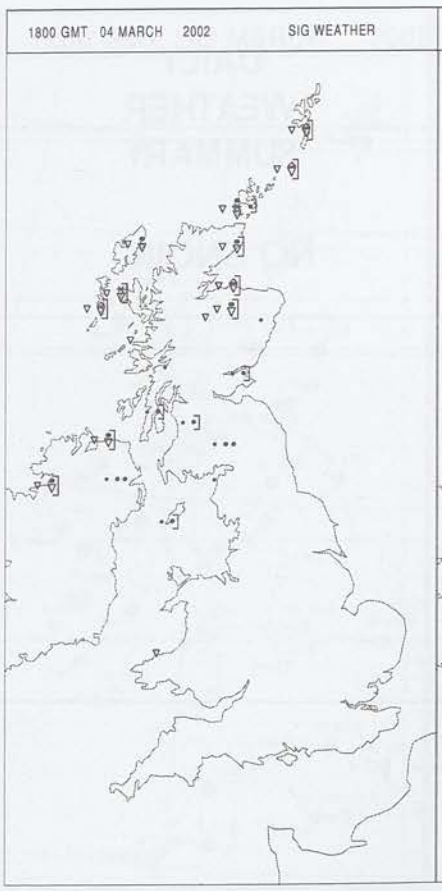
SIGNIFICANT WEATHER





Summary of UK Weather for Monday 04 March 2002.

Over England and Wales the night was dry though largely cloudy. A few clear periods developed, mostly in eastern England. In Northern Ireland and Scotland brisk westerly winds brought thicker patches of cloud at times which produced some light rain or drizzle, especially to western areas.

During the day the cloud persisted across large areas of England and Wales, making for a dull day. A few cloud breaks did develop, though, allowing some sunny periods. The best of these were to be found in East Anglia, Kent and along parts of the south coast. In Northern Ireland the cloud thickened to produce a little rain at times, chiefly late afternoon and early evening. Scotland had a more unsettled day with strong westerly winds and a band of rain spreading southeast across most parts through the day, reaching the borders by evening followed by showers. However, in sheltered areas to the east of high ground it remained mostly dry with a good deal of sunshine.

Under the persistent cloud temperatures were near normal but brighter spots became mild, and very mild in eastern Scotland.

EXTREMES

Highest Maximum:
12.3 Dyce, Aberdeenshire
Lowest Maximum:

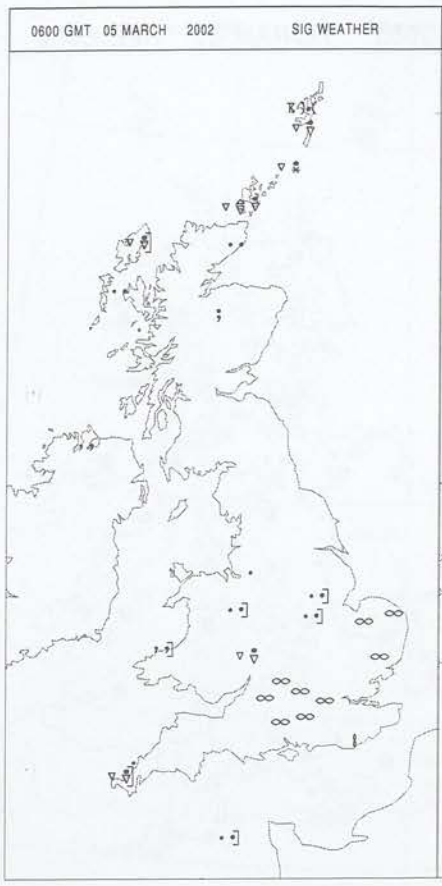
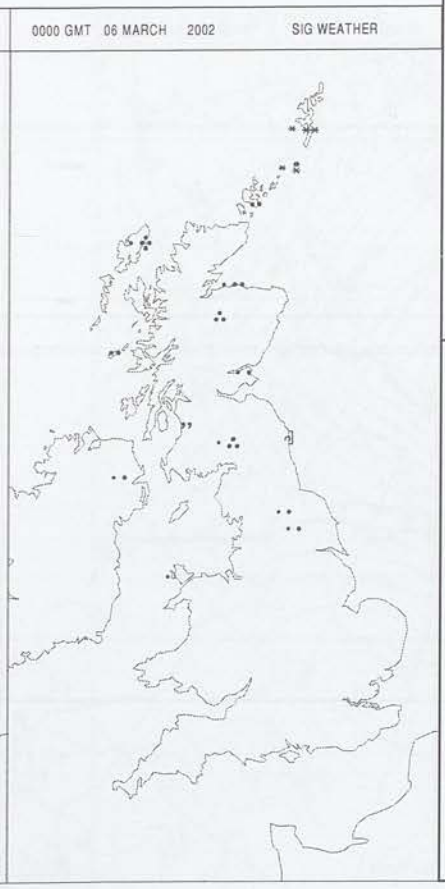
SIGNIFICANT WEATHER





Summary of UK Weather for Tuesday 05 March 2002.

Most places were dry overnight but there were showery outbreaks of rain across northern and western Scotland and a band of rain moved southeast across parts of Wales, the Midlands and southwest England.

The showers were still affecting northern and western Scotland around dawn and during the morning they became heavier and more persistent. Thunder was reported over the Outer Hebrides and hail/sleet in the northern isles but southern and eastern Scotland remained largely dry. The band of rain across the Midlands continued moving southeast but it turned increasingly showery and tended to peter out. Elsewhere the weather was mostly dry with good sunny spells, the best of these across Wales, but showers affected parts of Northern Ireland and these became more extensive during the afternoon. The rain edged into southwest Scotland and then into Cumbria reaching Lancashire by the evening. The southwesterly wind strengthened in the north, but it was light in the south.

Temperatures were generally above average or in the mild category, but it was very mild in parts of southern England and south Wales.

EXTREMES

Highest Maximum:
12.5 Hawarden Airport, Clwyd

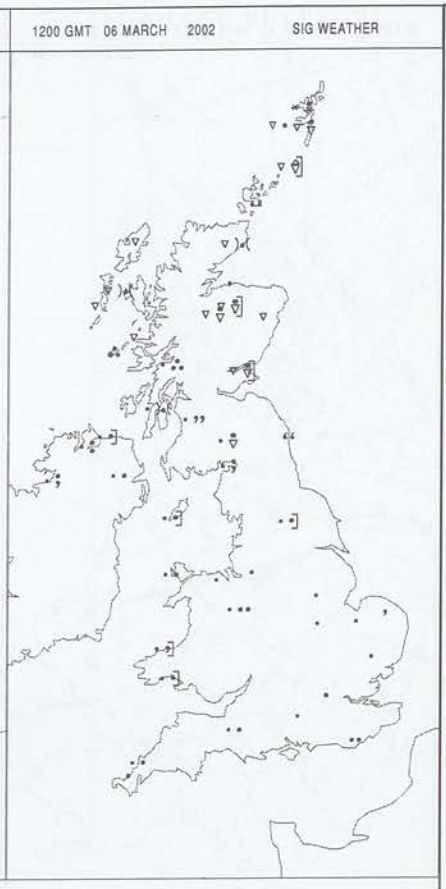
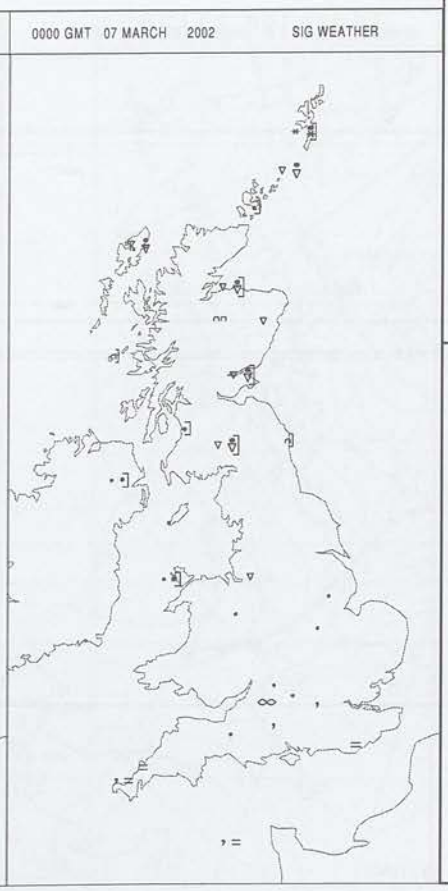
SIGNIFICANT WEATHER





Summary of UK Weather for Wednesday 06 March 2002.

Rain affected much of Scotland overnight (heaviest and most persistent in the west (particularly parts of Argyll and Bute) and accompanied by strong winds), Northern Ireland and northwestern parts of both England and Wales. Elsewhere the night was mostly dry apart from patchy rain later across East Anglia.

The rain over East Anglia slipped south and west across southern counties of England during the morning whilst the rain across Scotland became less widespread and more showery. Some lengthy sunny periods developed as the cloud broke, the best of these in Aberdeen. South Wales and southwest England became damp for a time as the rain over North Wales edged south. During the afternoon the rain over southern England cleared away to the southeast but showers continued across Scotland and Northern Ireland and some of these drifted into northern England. By the evening southern parts of the UK had just patchy rain or drizzle in places, but there were frequent showers in the north.

Temperatures were generally in the mild or very mild categories but it was exceptionally mild in northeast Wales.

EXTREMES

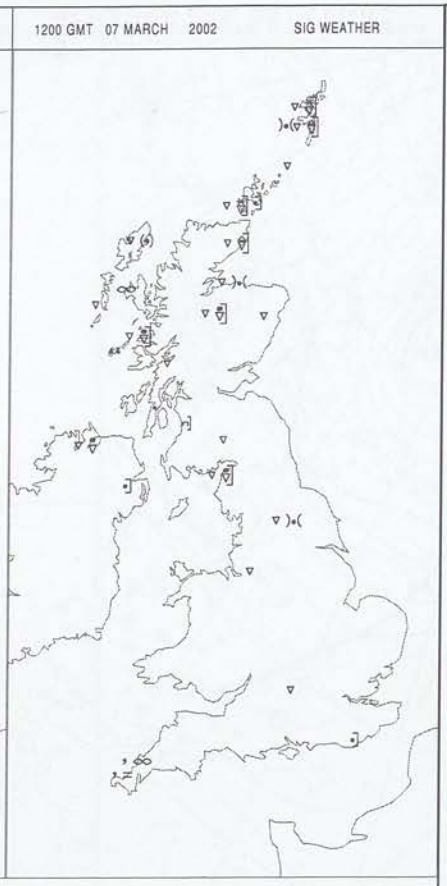
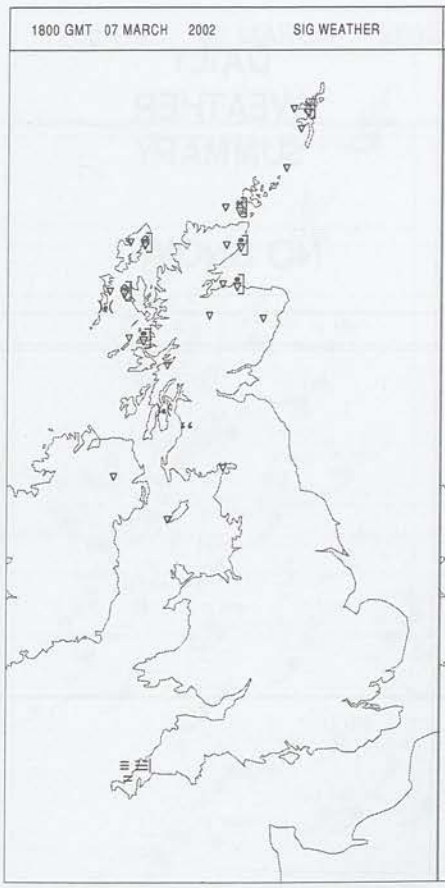
SIGNIFICANT WEATHER





Summary of UK Weather for Thursday 07 March 2002.

Showers, heavy at times, affected much of Scotland overnight, with Northern Ireland and northern England seeing outbreaks of light rain. Elsewhere it remained mostly dry and cloudy.

Showers continued to affect Scotland during the morning and Kinloss reported a gust of 51 knots in a heavy shower. Scattered showers also occurred across Northern Ireland and northwest England. The odd spot of rain was also reported across southern England as a decaying cold front pushed southwards.

Through the afternoon the showers over Scotland became less frequent and most places across the UK where dry with some sunshine.

Most places remained dry through the evening but outbreaks of rain reached the Western Isles and western parts of mainland Scotland, while Shetland had some wintry showers. Local mist and fog patches started to affect the coasts of Cornwall and south Wales.

Temperatures were mild or very mild, but coastal areas of south Wales, Dorset, Hampshire and East and West Sussex were exceptionally mild.

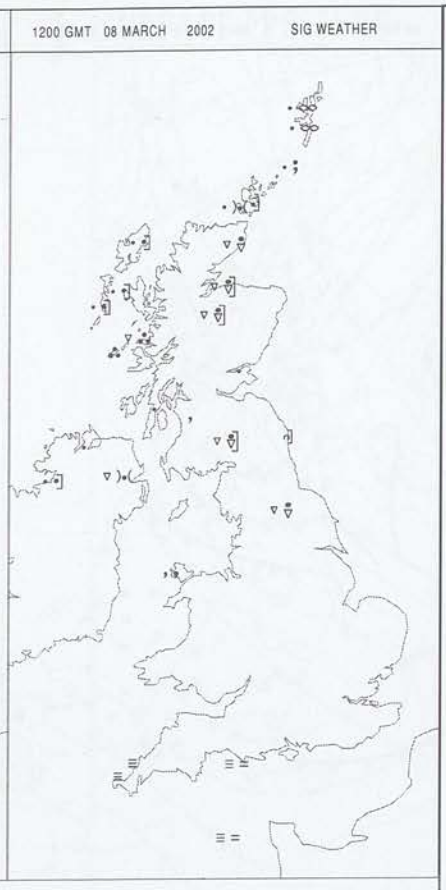
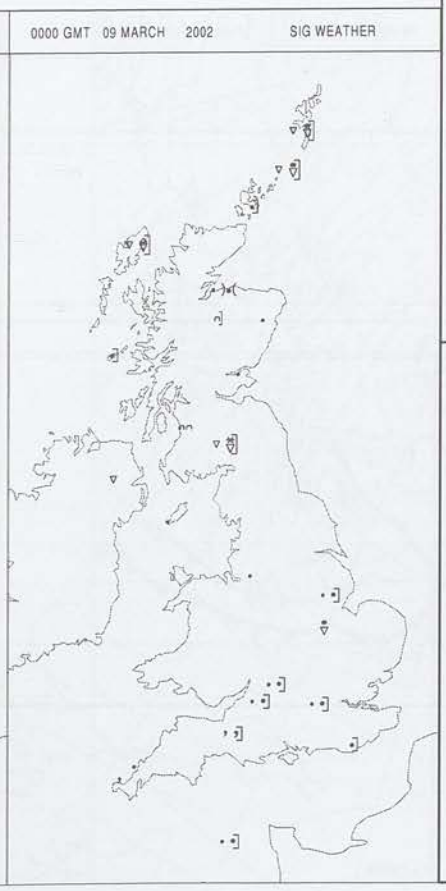
SIGNIFICANT WEATHER





Summary of UK Weather for Friday 08 March 2002.

There were some showery outbreaks of rain overnight in north and west Scotland and in Northern Ireland. These became heavier in northwest Scotland by the end of the night. The rest of Scotland and most of England and Wales had a dry night although there was some mist and drizzle around some southwestern coasts.

Eastern and southern Scotland had a dry, bright morning but the rain in the west and in Northern Ireland spread to all areas during the afternoon. It was heavy in places, particularly the northwest Highlands. After a bright start in the east, England and Wales become mostly cloudy. Most areas stayed dry although there were a few outbreaks of light rain around, mainly later in the day.

In the evening the more persistent rain cleared from Scotland and Northern Ireland although there were still some heavy showers around. The band of rain moved south into England and Wales but became narrower and more fragmented as it did so.

Temperatures were mostly mild or very mild and it was exceptionally mild for a time in eastern Scotland.

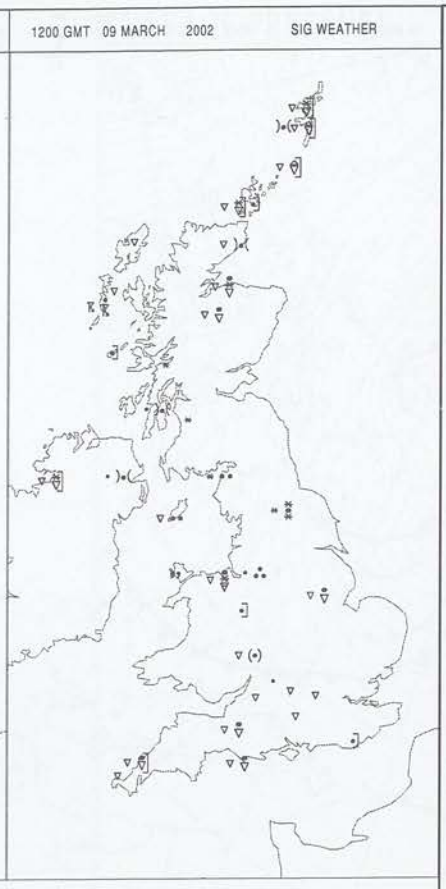
SIGNIFICANT WEATHER



Summary of UK Weather for Saturday 09 March 2002.

Patchy rain and drizzle affected southeast England during the early hours but that soon cleared away. Elsewhere, apart from a few showers, mainly across northwest Scotland, most of the country had a dry night with clear spells. However, rain reached Northern Ireland and western parts of Wales late in the night.

During the day, a low pressure system tracked eastwards across the country bringing rain to north Wales, the midlands and northern England, with the rain falling as snow over high ground in the north. Elsewhere there was a mixture of sunny spells and showers, some heavy with hail, and the showers were wintry in the north.

The low pressure system also brought strong winds, particularly to the southern half of the country, with gusts of 50-60 knots in places and a gust of 67 knots at the Mumbles.

The showers remained frequent across northern and western Scotland during the evening but elsewhere they became isolated leaving most places dry with clear spells. The winds also eased.

It was mild across East Anglia, southeast and central southern England but temperatures were close to normal elsewhere.

EXTREMES

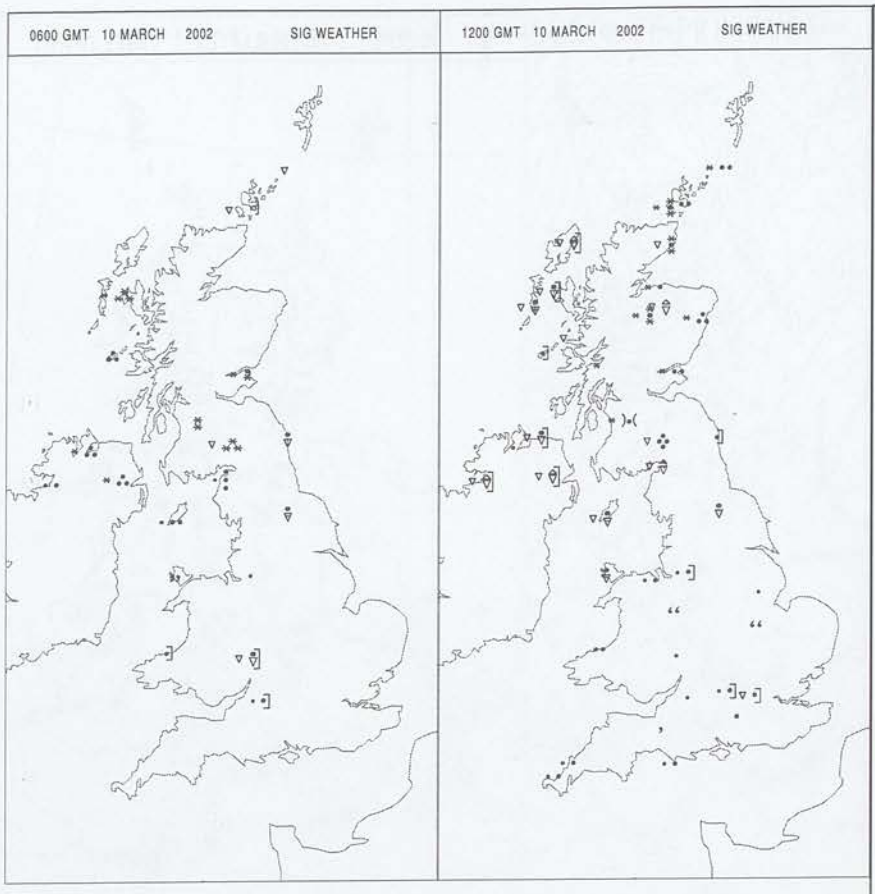
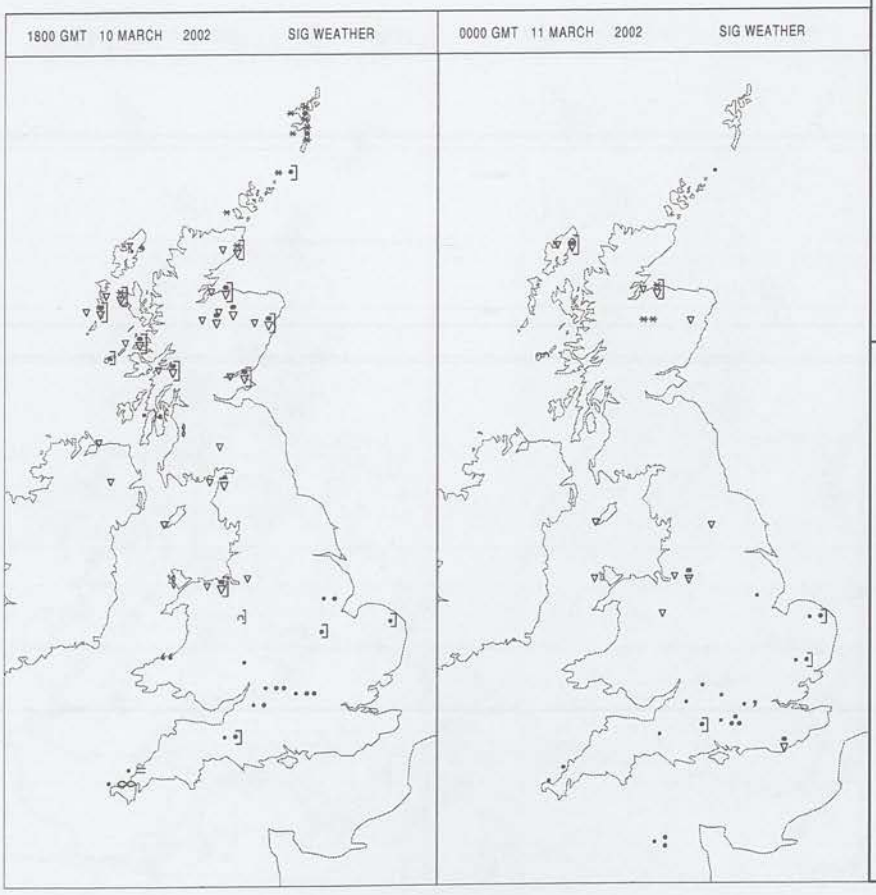
SIGNIFICANT WEATHER





Summary of UK Weather for Sunday 10 March 2002.

Rain, sleet and snow reached Northern Ireland during the early hours, spreading northeast across most of Scotland, where if started as snow, through the remainder of the night. Patchy rain also spread across Wales, the Midlands and northern England, with some snow over the hills in the north. Elsewhere it was largely dry.

Showers soon replaced the rain and snow across northern Ireland with the more showery conditions extending across Scotland during the morning. At the same time a band of showery rain moved across northern England, Wales and the west country. During the afternoon that band moved southeast across England, weakening in the process but it lingered across southeast England through the evening. Showers continued to affect Scotland and Northern Ireland with these showery conditions extending south-eastwards behind the band of rain. The showers where heavy, frequent and locally thundery across northwest Scotland.

The wind was fresh to strong across most of the country, at least for a time, with gales, particularly across the western Isles.

Temperatures were close to normal across Scotland and Northern Ireland but it was mild across much of England and Wales.

EXTREMES

SIGNIFICANT WEATHER

Summary of UK Weather for Monday 11 March 2002.

Towards southeastern parts of Northern Ireland and Scotland most of the night was clear and dry, whilst to the northwest, it was cloudy with showers. The showers were occasionally heavy, falling as hail/sleet or snow, and with southwesterly gales across exposed areas. During the day the northwest of Northern Ireland continued to see most of the showers there, whilst extending slowly into central parts of Scotland, still wintry for a time. Southwesterly gales began to slowly subside across the north of Scotland, as winds here turned to the north. After dark it remained similar.

Across Wales and Southern England skies were cloudier overnight with a fragmented band of rain running southwest-northeast, but with mainly clear skies across North Wales and Northern England. During the day the rain band pepped up extending into parts of Northern England with a brisk southwest wind blowing here too. Either side of the band there were some drier and brighter interludes. After dark most places became dry with some isolated mist and fog forming. Temperatures ranged from rather cold to very mild in parts of the south.

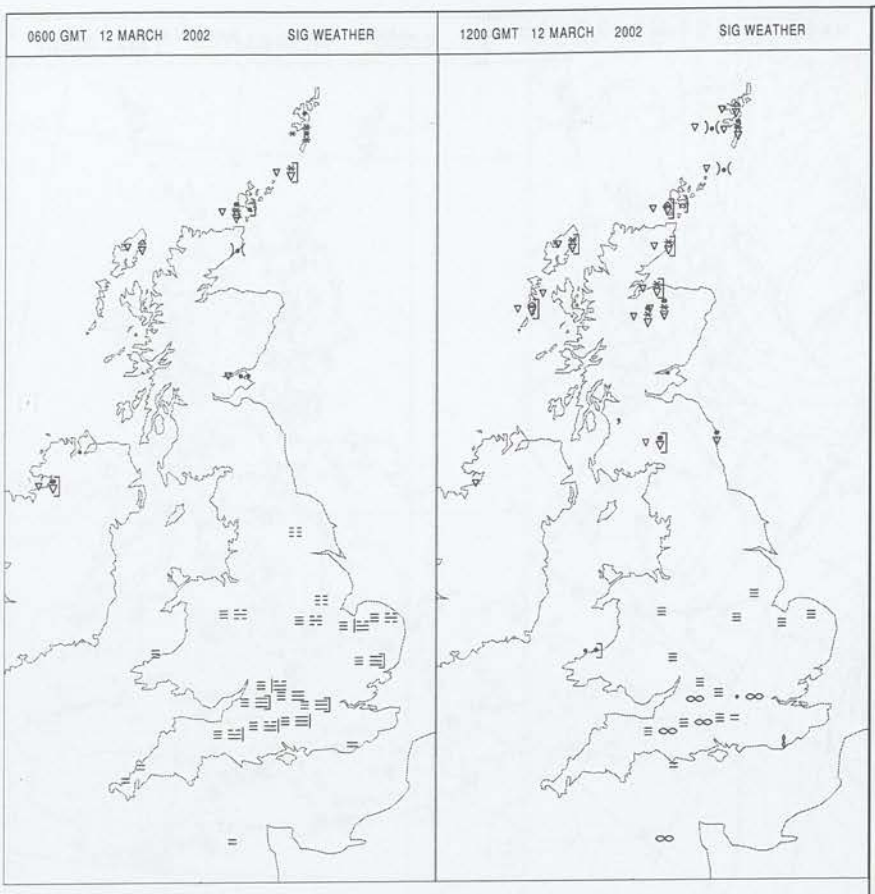
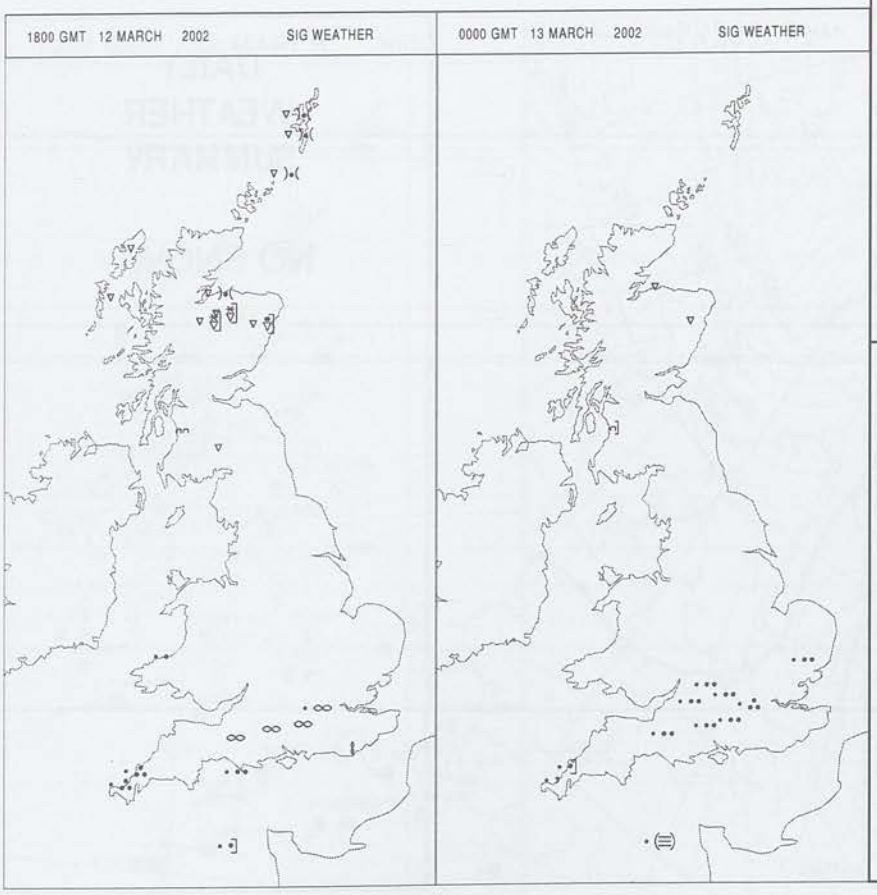
SIGNIFICANT WEATHER





Summary of UK Weather for Tuesday 12 March 2002.

Across northern and central parts of Scotland there were scattered showers overnight, with a few running into the north of Northern Ireland. Showers occasionally fell as hail/sleet and snow. Towards the southeast corner of England it remained cloudy with a few spots of rain, but across the rest of England and Wales cloud breaks developed. This encouraged some extensive fog to form, whilst temperatures in some areas also dipped below freezing. During the day most parts were dry, with a few scattered wintry showers continuing across northern Scotland, and a few spots of rain across parts of England and Wales, although becoming more widespread along English Channel coasts later. In between there was plenty of sunshine for the north, whilst towards the south of England after the early fog it stayed rather cloudy with a little brightness. After dark the rain extended north, staying mostly south of a line South Wales to Essex, turning locally heavy. Little change elsewhere. Temperatures ranged from rather cold to very mild in parts of southern England. Strong to gale force winds to the north of Scotland eased.

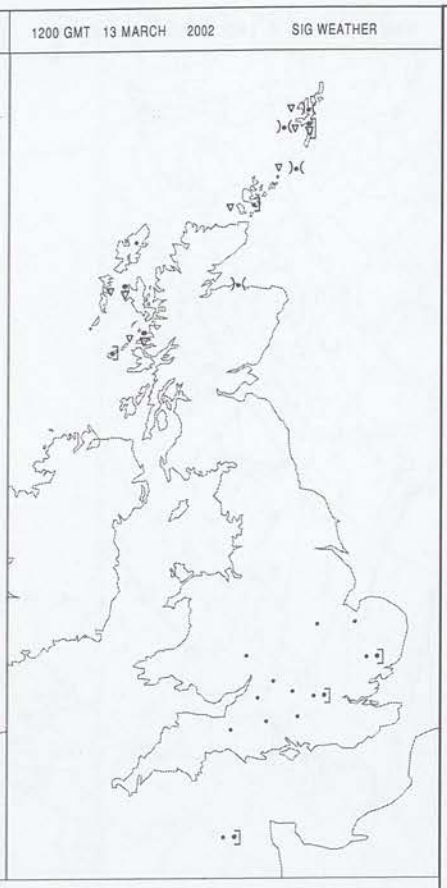
SIGNIFICANT WEATHER



Summary of UK Weather for Wednesday 13 March 2002.

The night was largely clear and frosty over Northern Ireland, north Wales, central and northern England, and most of Scotland, although scattered wintry showers occurred in the northern and western isles. South Wales, southern England, East Anglia and most of the Midlands had a generally cloudy night with rain at times, heaviest and most widespread in the south.

During the day, Scotland, except the south, had sunny intervals and showers, the showers falling as hail in places with snow over the mountains. Southern Scotland, Northern Ireland, North Wales, and central and northern England, had a dry and mostly sunny day. South Wales and the rest of England were mainly cloudy, although breaks developed later in the afternoon and evening over East Anglia and the Midlands. There were further outbreaks of rain, these mainly falling during the morning and to the south of the M4 corridor.

Temperatures were near normal over most of the country but cloudier parts of the south were rather cold.

SIGNIFICANT WEATHER

Summary of UK Weather for Thursday 14 March 2002.

After some clear spells early in the night, cloud increased across England and Wales. There was a little rain and drizzle over eastern parts of Scotland but the rest of the UK had clear spells.

Most of England and Wales had a cloudy, windy day but Cumbria and parts of the northwest were quite sunny. Rain reached the south coast of England soon after dawn and spread slowly north through the day. There were a few showers over East Anglia ahead of the main rain. The rain was heavy in places and there were reports of sleet over the hills and hail near the south coast. In the evening this rain band moved further north across Wales and the Midlands with showers into the southwest. A gust of 61 knots was recorded at Culdrose.

Northern Ireland, western and northern Scotland were largely sunny. Eastern and northeastern Scotland had some rain or snow showers. In the evening some sleet and rain reached southern Scotland whilst Northern Ireland clouded over.

Temperatures were mostly close to average. It was cold or rather cold over East Anglia and southeast England.

SIGNIFICANT WEATHER

Summary of UK Weather for Friday 15 March 2002.

Most parts had a cloudy night. Northern Scotland remained dry but elsewhere there were outbreaks of rain. The rain was locally heavy and wintry at times, chiefly over northern hills. It was a windy night in the north.

England and Wales had a grey and overcast day with further outbreaks of rain. The rain was still heavy in places and at times wintry, more especially over northern hills. There were some drier interludes. Later in the day, the cloud became more broken for a time in the extreme south, but further outbreaks of rain spread from south during the evening. The Channel Islands faired better with some bright or sunny spells, although some showers were evident in the afternoon.

Southern Scotland and Northern Ireland also had a cloudy day with outbreaks of rain. The rain was wintry in places, chiefly over the higher ground. The northern half of Scotland remained largely dry but with a good deal of cloud, although northernmost parts did see plenty of sunshine.

It remained windy in the north. The temperatures were close to normal around southern and western coasts, but it was generaly rather cold elsewhere.

SIGNIFICANT WEATHER

Summary of UK Weather for Saturday 16 March 2002.

Most parts had a cloudy night with outbreaks of rain, especially in the north and west. For eastern counties of England, where the skies started the night clear, fog formed. However, increasing cloud from the southwest lifted the fog later in the night.

Much of England and Wales started the day generally grey and overcast. Bright or sunny spells developed in many places. Showery outbreaks of rain edged northwards across western parts during the day. Many eastern areas remained dry, although later in the afternoon showery rain also pushed northwards into southeast England. This rain then extended into East Anglia during the evening. The rain was locally heavy with thunder.

Southern Scotland and Northern Ireland saw outbreaks of rain during the morning. The band of rain edged into central Scotland towards midday and then across northern Scotland during the afternoon, although by this stage the rain was more fragmented. Scattered showers followed on behind into Northern Ireland and southern Scotland during the afternoon.

It was generally rather warm or warm, although for northern Scotland the temperatures were close to normal.

SIGNIFICANT WEATHER

Summary of UK Weather for Sunday 17 March 2002.

Northern Ireland and Scotland were mostly dry overnight, with just a few light showers about, mostly in the north. Across Northern Ireland any showers quickly died away leaving clearer skies, with some clear spells across Scotland too. Wales and western parts of England stayed mostly dry, but across eastern parts showery outbreaks of rain edged northwards throughout the night, occasionally heavy. As the night wore on a further batch of heavy showers pushed into central and southern areas of England. Under clearer skies mist and patchy fog formed.

During the morning this batch of heavy showers steered northeast towards the Wash, finally fizzling out across northeast England. Elsewhere there were a few showers dotted about at first, but outbreaks of rain into southwest England by midday, spread slowly across Wales, Northern Ireland and then into central parts of England. The rain, locally heavy, continued to push into southwest Scotland and eastern England during the evening. Isolated thunder with the heavier showers then rain. Winds were south to southeasterly, locally strong in the west. Daytime temperatures ranged from normal to very mild.

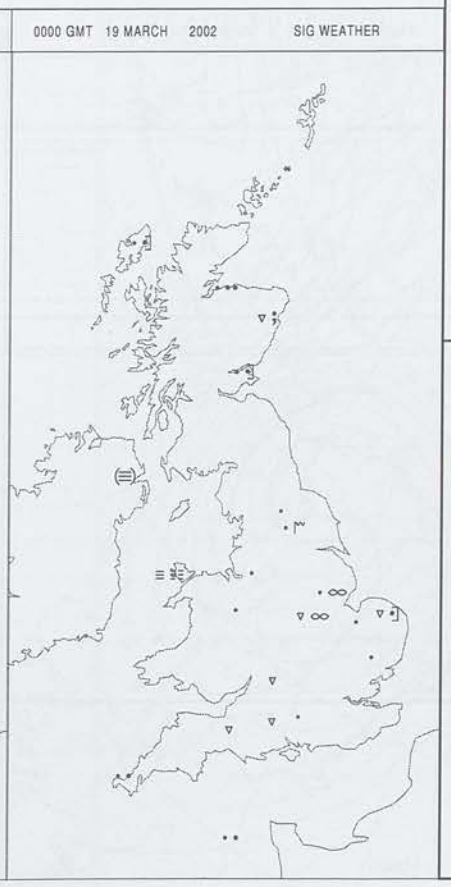
SIGNIFICANT WEATHER



Summary of UK Weather for Monday 18 March 2002.

The night was mostly cloudy, with showery outbreaks of rain running through Southeast England and East Anglia, then back in across southern parts of Scotland. During the night the rain in Scotland edged into northern parts, whilst across eastern England clearing into the North Sea. Towards dawn a heavy band of rain moved into the southwest of England, and just into the far south of Wales. In between these rain areas clear spells allowed some mist to form. During the day as an area of low pressure tracked through the Bristol Channel towards the Wash, this carried outbreaks of heavy rain northeast across Wales, and much of England. Across Scotland, northern and western parts continued to see some patchy rain, with sunny spells elsewhere. For Northern Ireland it stayed mostly dry with some sunshine. After dark the rain mostly petered out across England and Wales, otherwise there was little change. Highs ranged from rather warm to rather cold. As the low crossed the south, this bought strong to gale force winds south of a line from the Bristol Channel to the Wash.

SIGNIFICANT WEATHER

Summary of UK Weather for Tuesday 19 March 2002.

During the night outbreaks of rain affected southern coastal counties of England and southern parts of Scotland. Showers continued over northern and central Scotland, wintry in places. Northern Ireland saw fog patches forming later in the night.

During the morning outbreaks of rain spread across south Wales, the southwest and central southern parts of England, as well as continuing over southern Scotland. In between it was drier with some sunny intervals. Wintry showers still peppered northern Scotland, and these continued throughout the day and into the evening. The afternoon saw more persistent and heavier rain pushing into Wales and southwest England, and this rain reached Northern Ireland and northwest England later in the afternoon. Coastal fog started to affect Devon and Cornwall.

The rain continued north and eastwards during the evening, crossing Wales, Northern Ireland, Southwest Scotland and most of England. Coastal fog affected much of west Wales and southwest England.

Temperatures were normal or rather cold over much of Scotland and northeast England, but rather warm, and locally warm, across the rest of England, Wales, Northern Ireland and southwest Scotland.

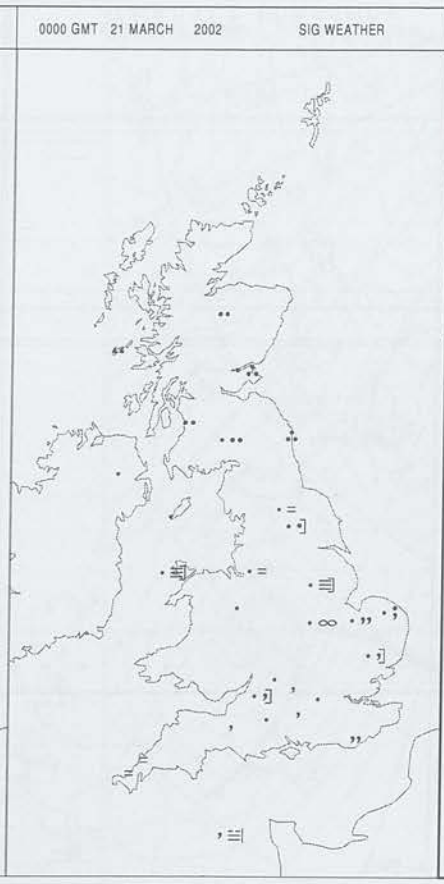
SIGNIFICANT WEATHER



Summary of UK Weather for Wednesday 20 March 2002.

Outbreaks of rain affected eastern England early in the night and also the far southwest of England towards daybreak. Southern Scotland also saw occasional rain. Remaining areas had a largely dry night. Clear spells over northern Scotland allowed a frost to form.

The rain over the far southwest of England pushed northeastwards during the day to affect much of southern England and south Wales by midday. The rain was heavy in places. The rain continued northeastwards during the afternoon, crossing north Wales, the Midlands, East Anglia, northwest England and Northern Ireland. Damp and drizzly conditions followed the rain into southern parts with a good deal hill and coastal fog. Northeast England remained mostly dry for daylight hours with some bright or sunny spells during the morning. However, the rain arrived here during the evening.

For Scotland, central parts saw occasional rain. The rest of the country was largely dry with often cloudy skies in the south and some sunny spells in the north. The southern half of Scotland became wet during evening.

The temperatures were generally close to normal across Scotland. Elsewhere, it was rather warm or warm.

SIGNIFICANT WEATHER

Summary of UK Weather for Thursday 21 March 2002.

Overnight, outbreaks of rain affected much of Scotland, but more especially central parts with snow over the hills. Rain was also evident over southwest England towards the end of the night. Remaining areas had a largely dry night.

Southernmost parts of England had some light rain for a time during the morning, but this had largely cleared away by midday. Much of England and Wales then had a dry and bright day with sunny spells. Some western coasts were affected by fog at times. During the evening, showery rain pushed eastwards across northern England.

Northern Ireland had a bright day with some sunshine at times, but there were showers during the latter part of the afternoon and early evening.

For Scotland, the overnight rain tended to peter out during the morning. The skies remained largely cloudy although the far northeast did see a good deal of sunshine. Further rain, heavy at times, pushed into western Scotland during the afternoon and then across the rest of Scotland, except the far northeast, during the evening.

The temperatures were close to or a little below normal for northeast Scotland. Elsewhere, it was rather warm or warm.

EXTREMES

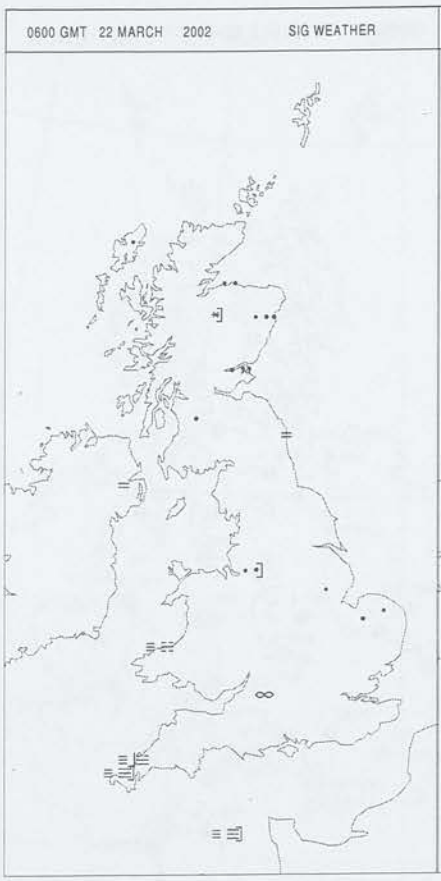
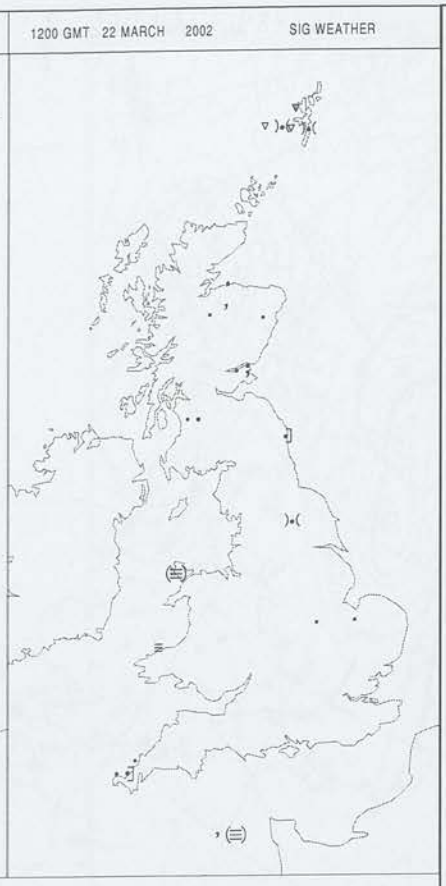
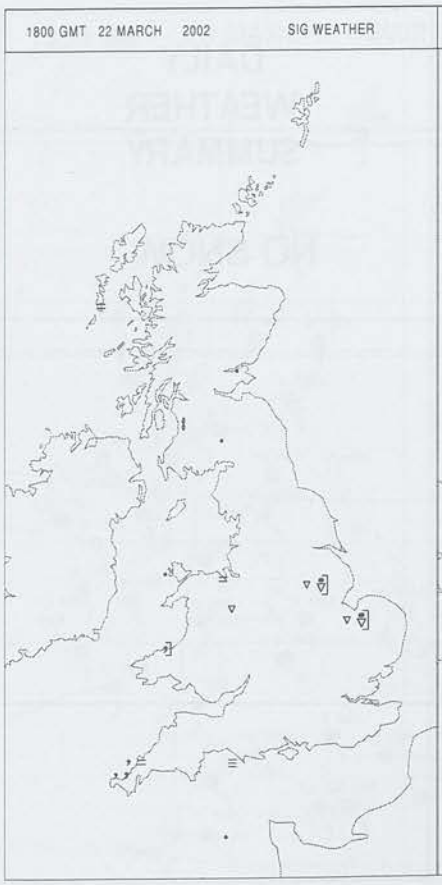
SIGNIFICANT WEATHER







Summary of UK Weather for Friday 22 March 2002.

England and Wales started Friday generally dry with some clear spells in central parts, but elsewhere it was mostly cloudy. Some patchy light rain did affect parts of northwestern England, though. Northern Ireland was also mostly cloudy, whilst rain extended northeast across many parts of Scotland, save the far north.

Outbreaks of patchy light rain or drizzle and coastal fog patches spread slowly from the southwest along the English Channel and up through the Irish sea during the morning, whilst the rain in Scotland became concentrated mostly in eastern parts.

Early in the afternoon showers began developing in line from central Scotland through northeast England southwards into East Anglia, with a few of these quite heavy, one near Leeds for example.

Towards evening most places became dry with just a little patchy drizzle around southern and western coasts of England and Wales. It was not a particularly sunny day, with the best sunshine in the far north but with hazy sunshine some very warm temperatures were achieved near the south coast.

Elsewhere temperatures were mostly rather warm but normal or below near some North Sea coasts.

EXTREMES

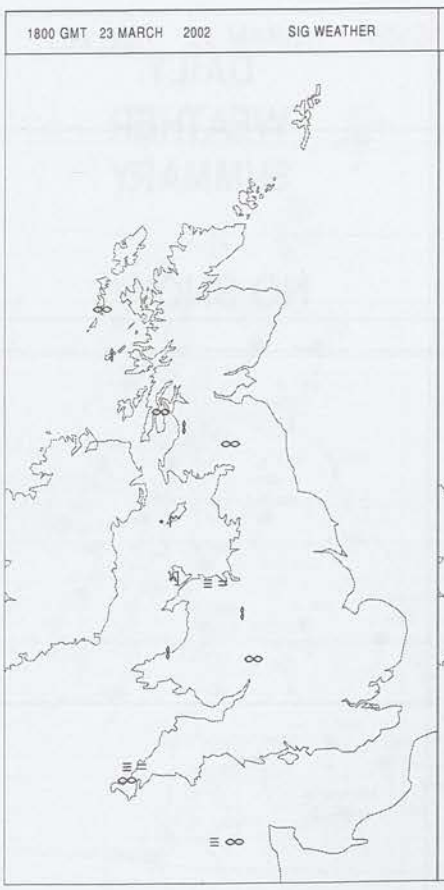
SIGNIFICANT WEATHER



Summary of UK Weather for Saturday 23 March 2002.

Western parts through the early hours were rather misty with fog around coasts, over hills and also occasionally in valleys. Elsewhere it was largely dry but with extensive high cloud, although more broken cloud flirted with the east coastal fringes from time to time.

Extreme eastern areas of the British Isles had the best of any bright sunshine on offer through the day, but with many places in the eastern half of the country having hazy sunshine for much of the time. Central and western areas were generally more cloudy with misty conditions continuing around the western coasts of mainland Britain, where there was even the odd spot of light rain or drizzle. Slowly the low cloud began to break up later in the day in central areas as the drier air to the east fed across.

Temperatures were a little below normal along the North Sea coasts, but were normal just inland in the east and increased the further west one was situated to be generally rather warm in western localities.

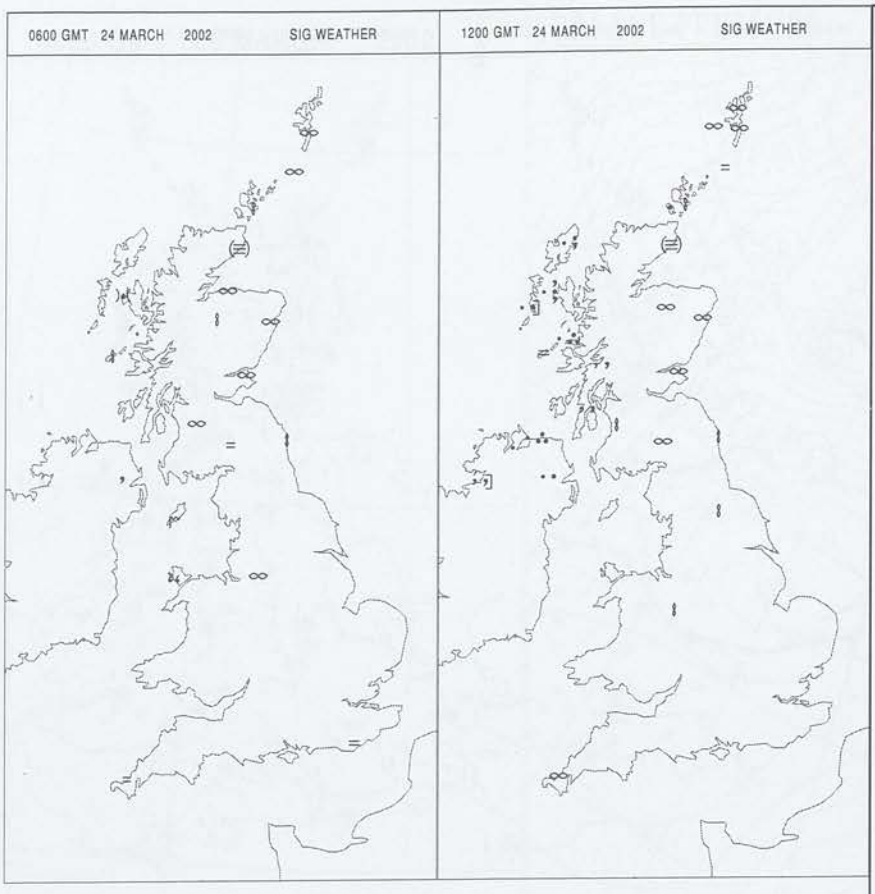
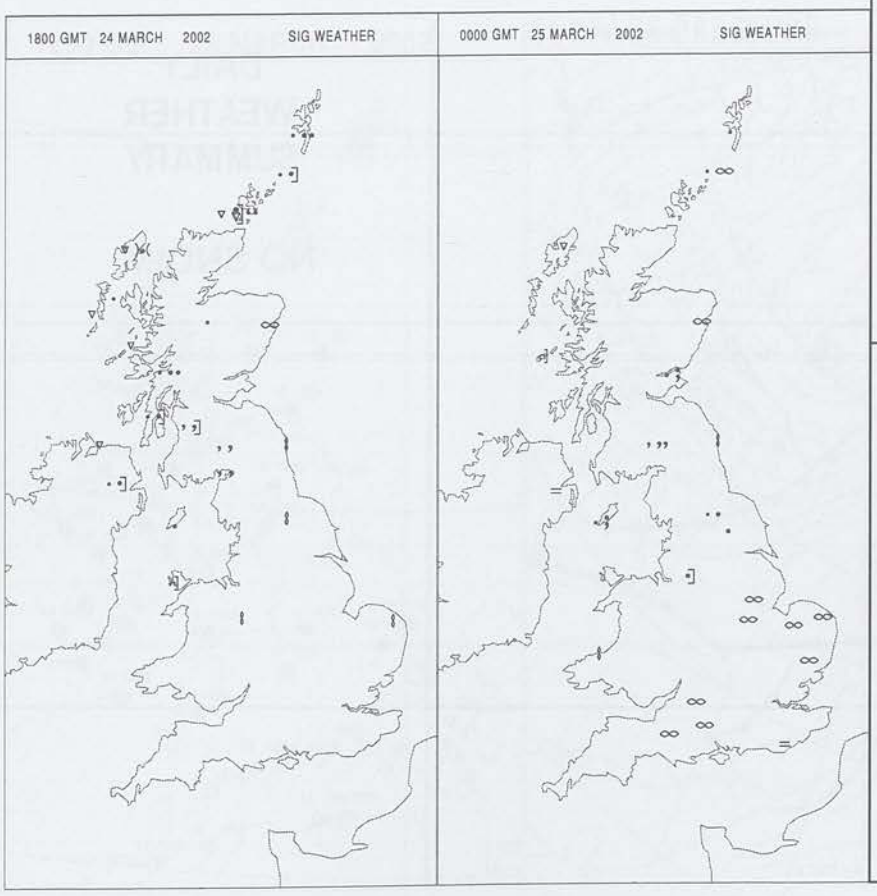
SIGNIFICANT WEATHER





Summary of UK Weather for Sunday 24 March 2002.

The night was dry in most parts of the country although a few spots of rain and drizzle did affect parts of western and northern Scotland at times. Long clear spells over England and Wales allowed ground frost and local air frost to develop along with a few mist patches.

On Sunday a band of rain spread gradually eastwards across Scotland and Northern Ireland with a few heavier bursts of rain in places. Sheltered eastern Scotland remained mostly dry. Across England and Wales most of the day was dry and there was a good deal of sunshine in places, the best of the sunshine across East Anglia, southeast England and along the south coast. Cloud thickened in the north and west later, and patchy light rain slipped south-eastwards to affect parts of northern England and northwest Wales during the evening.

Winds were light southeasterly in many areas but strong and gusty at times near the western coast of Scotland.

Temperatures were generally near normal to rather warm though parts of the south and southeast became warm.

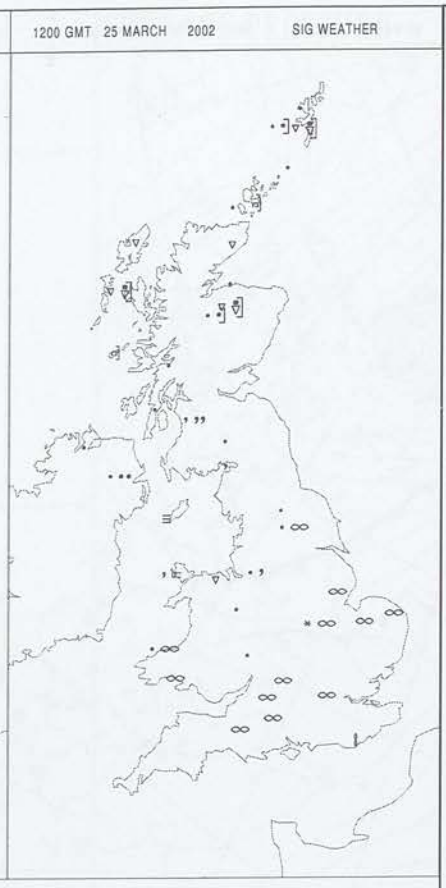
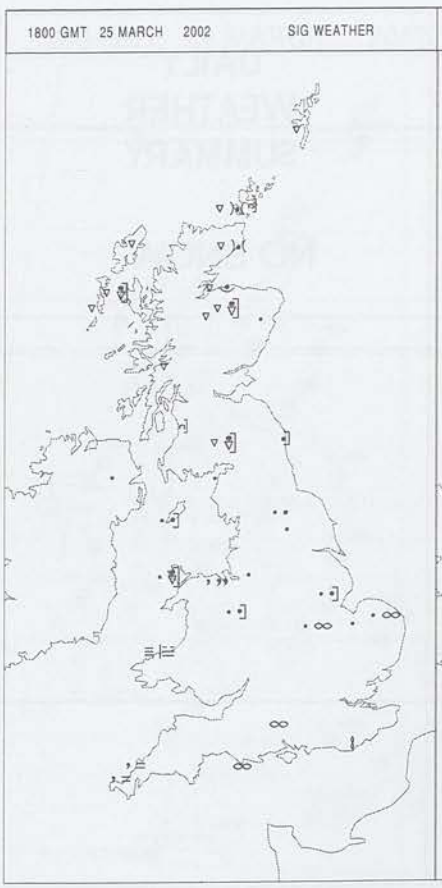
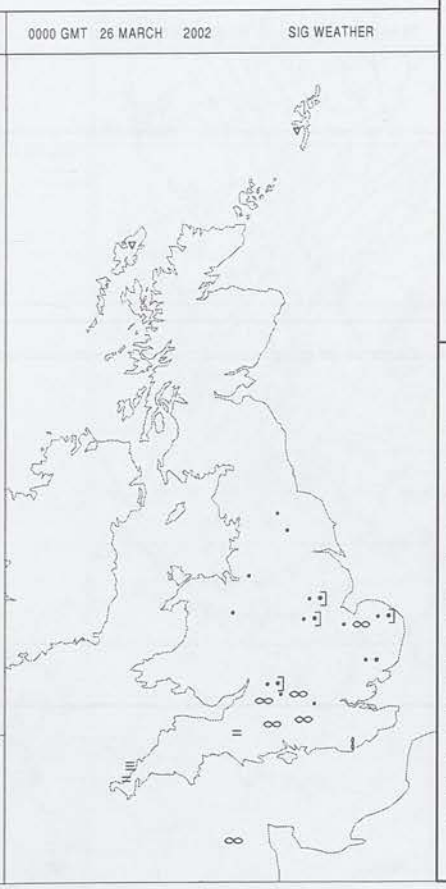
SIGNIFICANT WEATHER







Summary of UK Weather for Monday 25 March 2002.

There were outbreaks of rain and drizzle in southern Scotland and northern England overnight and, by the end of the night some heavier rain spread into northwest Scotland but for most of the UK it was a dry night with a few mist patches.

During the day many southern parts of England were dry and bright with a good deal of sunshine, especially along the south coast. Outbreaks of rain and drizzle moved southeastwards across Scotland and Northern Ireland in the morning and into northern England, Wales and the far southwest in the afternoon. The rain became generally lighter and more patchy as it moved southeastwards later in the day. In Scotland and Northern Ireland, the morning rain was followed, especially in the west, by heavy showers with some hail in places.

In the evening, there were some outbreaks of mainly light rain in the southeastern quadrant of Britain and the showers in the north became confined to the Northern and Western Isles. Skies became clear away from the southeast.

It was warm or very warm in most places.

SIGNIFICANT WEATHER

Summary of UK Weather for Tuesday 26 March 2002.

Overnight there were scattered outbreaks of light rain across central and southern parts of England but elsewhere the night was dry with clear periods and isolated mist patches.

The mist patches and the light rain cleared during the morning leaving a generally dry day with long sunny periods in many places, the best of these in Glasgow. Parts of East Anglia and southeast England were cloudy at times and there was a scattering of showers across Suffolk, Essex, Kent and Sussex. Cloud also affected Cornwall during the afternoon and the sunshine turned hazy at times across the northern half of the UK. The showers in the southeast petered out in the afternoon, but later in the afternoon and evening patchy rain extended from the west across parts of the Outer Hebrides and the far west of Scotland. Winds were generally light to moderate but there were gales in the far northwest of Scotland.

Temperatures were mostly either near average or in the rather warm category, but in southwest England they were 4 or 5 degrees above the late March norm.

SIGNIFICANT WEATHER

Summary of UK Weather for Wednesday 27 March 2002.

Under the influence of high pressure, much of the British Isles had a dry twenty four hours.

Remnants of a weak weather front brought some patchy low cloud to the extreme southeast of England overnight, and a more active frontal band affected the north and west of Scotland, producing quite an extensive cloud sheet here and occasional rain or drizzle. Elsewhere though there were clear periods and with light winds, patchy mist, fog and frost formed across parts of England and Wales.

Patchy cloud affected southern and southeastern parts of England during the morning, although this cleared to bring much of England and Wales a fine afternoon. High cloud made the sunshine hazy across Northern Ireland and Scotland too, and was accompanied by a brisk wind. Meanwhile a troublesome weather front continued to plague the far north and west of Scotland, giving further patchy drizzle, and local gales.

During the evening mist patches started to reform across England and Wales under clear periods, and although it became generally dry, cloudier skies kept temperatures up in Northern Ireland and Scotland.

Temperatures were mostly rather warm.

SIGNIFICANT WEATHER

Summary of UK Weather for Thursday 28 March 2002.

The bulk of the British Isles continued dry and settled, under the influence of high pressure. The only exception to this was the extreme north and northwest of Scotland, which was affected by a weak weather front.

The overnight period saw clear periods and light winds across England and Wales, which encouraged patchy fog and frost to form. Around dawn some of that fog became particularly dense, causing problems for motorists. Patchy cloud and a breeze prevented a frost forming across Northern Ireland and Scotland, and across the far north and northwest of Scotland the odd patch of drizzle was noted, along with local gales.

Fog cleared from England and Wales around mid morning, leaving a dry and mainly sunny day, and Northern Ireland also enjoyed plenty of fine weather too. A fair amount of high cloud affected Scotland, and the extreme north and west continued to hold onto thicker cloud and windier conditions.

During the evening there was little notable change, although mist patches started to reform in places under lack of cloud cover.

Temperatures were rather warm to warm.

SIGNIFICANT WEATHER

Summary of UK Weather for Friday 29 March 2002.

Outbreaks of rain affect the Hebrides and northwest Scotland overnight but the rest of the UK remained dry. Patches of fog developed across England and Wales, but it became fairly widespread across Lincolnshire and Yorkshire before dawn. There was also a widespread ground frost and pockets of air frost.

Once the fog cleared much of the UK had a dry, warm and sunny Good Friday with 10 or 11 hours of sunshine being reported from as far apart as Aberdeen and Torquay. It was only the far northwest of Scotland that was cloudier with a few outbreaks of light rain.

During the evening showers occurred over Orkney but elsewhere it remained dry with largely clear skies. Patchy fog did however push onto the shores of northeast England.

Temperature wise much of the UK was very warm, and even in the cloudier northwest it was still warm. However some coastal areas of south and east England had an onshore breeze and remained near normal.

SIGNIFICANT WEATHER

Summary of UK Weather for Saturday 30 March 2002.

Most places had a dry and fairly clear night, but scattered showers affected the southeast of England towards the dawn period. Patchy fog formed over England and Wales, more especially through the Vale of York and over Northumberland. Fog was also fairly widespread through central and eastern Scotland.

The fog cleared quickly in the morning and apart from scattered showers over western Scotland, it was a dry morning with some sunshine across the country. Cloud increased across Northern Ireland and western Scotland during the afternoon with outbreaks of rain, these becoming persistent over Northern Ireland by evening. Scattered showers developed over the Midland, East Anglia and southeast England during the afternoon, small hail being reported from Danbury in Essex.

Through the evening, rain continued over Northern Ireland and western Scotland and started to encroach on western parts of England and Wales. The showers across central and eastern England mostly died away during the evening.

Temperatures ranged from rather warm over Northern Ireland and exposed coasts of southern England, to warm over western Scotland and southwest England, and very warm elsewhere.

SIGNIFICANT WEATHER

Summary of UK Weather for Sunday 31 March 2002.

Clear spells in the southeast of England allowed a local ground frost overnight, but more cloudy skies predominated across the bulk of the country. Outbreaks of rain and drizzle, heavy and quite persistent in places, especially over high ground, affected many areas in the west of the UK though Northern Ireland and parts of Scotland were largely dry again by morning.

Easter Day was cloudy across much of the country, though the southeast of England had some sunshine in the morning and some western areas brightened at times in the afternoon. Patchy rain and drizzle continued in places, mainly in the south and southwest of England in the morning then spreading on to reach Wales and Northern Ireland through the afternoon, and into western Scotland in the evening. It was misty at times around western coasts and hills with some fog patches.

Temperatures were mostly above the seasonal normal, in the warm category, but it was locally very warm where there was shelter to the lee of high ground and in the brighter parts of the southeast.

EXTREMES
